PL. 31. CYNODON D'EGERTONIANUM, NEW PRAIRIE SUBSTITUTIONS OF CYNODON.

By Mrs. F. C. EGERTON.

Cynodon d'egertonianus, this replacement substitute has been introduced into the collection of the Botanical Survey of India, and is now being distributed to the various stations of the Survey. It is a very hardy and vigorous plant, and is well adapted to the conditions of the Indian climate.

Cynodon d'egertonianus, *Cynodon*.

Description.

Cynodon d'egertonianus is a plant in a grassy field, having several specimens, some of which are planted in pots. The plant is a very hardy and vigorous one, and is well adapted to the conditions of the Indian climate. It is a very hardy and vigorous plant, and is well adapted to the conditions of the Indian climate. It is a very hardy and vigorous plant, and is well adapted to the conditions of the Indian climate.

The plant is a very hardy and vigorous one, and is well adapted to the conditions of the Indian climate. It is a very hardy and vigorous plant, and is well adapted to the conditions of the Indian climate. It is a very hardy and vigorous plant, and is well adapted to the conditions of the Indian climate.

Among the specimens of *Cynodon d'egertonianus* collected, attention was particularly directed to the specimen of a plant which is the result of a cross between the two grasses, and for the purpose of which, in a living state, no small quantity was cultivated. These plants were specially investigated by Mr. Egerton, and from the following description it is seen that the plant is a very hardy and vigorous one, and is well adapted to the conditions of the Indian climate. It is a very hardy and vigorous plant, and is well adapted to the conditions of the Indian climate. It is a very hardy and vigorous plant, and is well adapted to the conditions of the Indian climate.
